biochemistry explained employs an innovative approach which has proven highly successful in the author's own classes the author

establishes a thorough understanding of the foundations of and common linkages between molecular structures and reactions so that eventual interpretation of complex biochemical pathways and reactions is easy all of the major molecular structures and biochemical pathways are explained and for the most part these center on mammalian biochemistry the text is supported by biochemical nomenclature and questions to bear in mind while reading higher learning sections are also provided for advanced students written in an informal conversational style this textbook will serve as an invaluable resource for any student who is struggling with the standard texts and for postgraduate students who need to refresh their knowledge

the purpose of the present text is to distil the experience of a number of workers active in the field of biochemical education so providing readable accounts which it is hoped will be of significant benefit to those who are new to the teaching profession in addition to those who may be stimulated to experiment with alternative strategies in their own teaching situation from the various contributions considered in this book each topic in its widest sense would warrant at least a volume on its own and indeed such texts are currently available however it was felt more appropriate to restrict the coverage to those aspects which are of particular use to the subject of biochemistry and for which work in this area has already achieved some measure of success in effect what each of us is doing is supplying findings from a body of knowledge collectively called educational technology without entering the debate on the semantics of what educational technology is or is not it doesn't take long to realise that like the vast majority of subject areas it has its own unique terminologies and vocabulary whilst it is inevitable that such terms will appear throughout the text hopefully all will be explained on first use and so it is not envisaged that this will be too distractive to the reader

learning strategies for critical thinking are a vital part of today's curriculum as students have few additional opportunities to learn these skills outside of school environments therefore it is essential that educators be given practical strategies for improving their critical thinking skills as well as methods to effectively provide critical thinking skills to their students the research anthology on developing critical thinking skills in students is a vital reference source that helps to shift and advance the debate on how critical thinking should be taught and offers insights into the significance of critical thinking and its effective integration as a cornerstone of the educational system highlighting a range of topics such as discourse analysis skill assessment and measurement and critical analysis techniques this multi volume book is ideally designed for teachers instructors instructional designers curriculum developers education professionals administrators policymakers researchers and academicians

when facilitating high quality education using digital technology to personalize students learning is a focus in the development of instruction there is a need to unify the multifaceted directions in personalized learning by presenting a coherent and organized vision in the design of personalized learning using digital technology digital technologies and instructional design for personalized learning is a critical scholarly resource that highlights the theories principles and learning strategies in personalized learning with digital technology featuring coverage on a broad range of topics such as collaborative learning instructional design and computer supported collaborative learning this book is geared towards educators professionals school administrators academicians
